

C63 Sealand GMT

Owner's Handbook

Time on your side

Your Christopher Ward watch has been designed in Britain and engineered in Switzerland by highly talented craftspeople. This ensures not only accurate and precise timekeeping, but also brings a real pride of ownership that only watches of the highest quality standards can hope to deliver.

You have made an investment, a good one, and the aim of this manual is to help you make the most of that investment in what we hope will be a lifetime of ownership.

Mike France
CEO & co-founder

The Sealand collection

There are few things more human than the urge to explore.

To travel, search or discover – just for the joy of it.

And when you do explore, you need a timepiece that's not only accurate but rugged enough to handle whatever comes its way.

This is the thinking behind the Sealand collection. And the reason your new watch looks and functions the way it does.

Whether you've gone for the C63 Sealand Automatic (the 'purest' Sealand), the internationally-minded C63 Sealand GMT or the titanium C63 Sealand Elite, you're wearing a watch that's inspired by the sports-explorer watches of the mid 20th century.

But Sealanders are also made for the modern world – a world where leisure and work mix, and where adventure and business are often the same. Watches that are tough but finished to such a high specification, they're as at home in a high-end restaurant as they are up the side of a mountain.

Mike France, our CEO, was one of the main driving forces behind the collection. He knew Christopher Ward needed to produce a range of sports watches that sit somewhere between the practicality of a C60 Trident Pro 600 and the retro-sophistication of a C65 Trident Auto.

"These pieces are as tough as a dive watch, but underplay it with more modest, bezel-free lines," he says. "They can be worn anywhere, and as work and home life continue to blend, that's become more relevant than ever."

Now you know the thinking behind your new watch, you have but one task: to strap it on and see where your explorations take you.

C63 Sealander GMT

Exploration is not just an activity. But a state of mind. And it's the spirit of exploration that permeates every part of your beautiful C63 Sealander GMT.

Like other timepieces in the Sealander range, it's a do-anything, go-everywhere watch.

But what sets it apart is its classic 'GMT-explorer' design – which boasts a fixed 24-hour bezel rather than the rotating one you'll find on regular GMT watches. There's a reason for this.

GMT-explorers were originally made for pro-cavers (AKA 'spelunkers') who could become disorientated after long periods in the dark.

With no daylight to guide them, they set the GMT hand to their present time zone, using the fixed 24-hour bezel.

If they lost track of time, the GMT hand would tell them whether it was, for example, 10:00 or 22:00. And they could rely on it because the bezel never moved.

On the C63 Sealander GMT you can use the GMT function this way, or set it to another time zone as you would on a regular GMT. Just line up the ultra-visible GMT hand with your preferred time zone on the bezel and you'll be set.

While much of the appeal of the C63 Sealander GMT is in its looks – and it's very handsome – there's something satisfying about knowing it'll have your back if you ever decide to try a spot of underground exploration. Well, you can't be too careful, can you?

6

Display and controls

Your C63 Sealander GMT has a maximum power reserve of up to 56 hours when fully wound. To re-power the watch after a period of non-use, simply wind the crown for approximately 20 revolutions. Normal wearing will very quickly allow the rotor to start re-powering the watch over time after putting it on your wrist.

Features

- Swiss made
- Self-winding 25 jewel mechanical movement
- Up to 56-hour power reserve
- GMT complication
- Date calendar
- Central hacking seconds hand
- Anti-shock system
- Twin-flag engraving over 'Colimaçoné' finish on the rotor
- Elaboré 'Colimaçoné' finish on the movement
- Super-LumiNova® Grade X1 BL C1 hands and indexes
- Top-brushed indexes with diamond polished facets
- Brushed and polished hands
- Signature Trident counter-balance on seconds hand
- Brushed and polished marine-grade stainless steel case
- Circular brushed and polished fixed steel bezel with black lacquer filling
- Anti-reflective sapphire crystal
- Screw-down display caseback
- Embossed screw-down crown
- Unique engraved serial number
- Eco-friendly luxury presentation case and owner's handbook

Technical Information

Calibre	Sellita SW330-2
Case	Stainless steel
Diameter	39mm
Height	11.85mm
Lug to lug	45.8mm
Weight	62g
Water resistance	15 ATM (150 metres)
Vibrations	28,800 per hour (4Hz)
Timing tolerance	-20/+20 seconds per day
Strap width	20mm

Setting the time, date and GMT hand

For a superior water resistance your crown is of the screw-down type. The crown should sit flush to the case (position **1**) in order to maintain water resistance.

- First unscrew the crown anti-clockwise from the case to position **2** for winding in power. Wind in a clockwise direction to re-power the watch. Your C63 Sealander GMT has a maximum power reserve of up to 56 hours when fully wound. Normal wearing will allow the rotor to start re-powering the watch over time after putting on your wrist.
- Pull gently into position **3**. For rapid date correction, turn in an anti-clockwise direction. To set the GMT hand, turn the crown clockwise and rotate the hand until you have reached the desired time indication. The GMT hand moves in one-hour increments.
- Pull gently into position **4**. This position is used for handsetting and stopping of the seconds hand. For precise time setting it is recommended to pass beyond the desired minute and to set the hand backwards.

1. Crown screw-down position
2. Manual winding
3. Date/GMT setting
4. Time setting

PLEASE NOTE:

*Date correction should not be carried out between 20.00 hr and 02.00 hr as the watch gearing will already be aligning itself to change the date. The crown should always be pushed in after adjustment, and it is best to do so from position **3** to avoid advancing beyond the desired date. You must always ensure the crown is fully tightened before any use in water.*

Using the GMT hand for travel

Set the time in your new destination by pulling the crown into position **4** and move the hour/ minute hands until they indicate the desired time.

Push crown into position **3** and wind, clockwise, the GMT hand around the 24-hour scale on the bezel until you have the right time at home. E.g. If you're travelling from London at 12.10 to New York, you would turn the hour/minute hands to 7.10 (New York time is five hours behind London) and wind the GMT hand around to the 12.10 position.

Once set, it means that, for example, you can gauge the time to ring your friends and family without waking them in the middle of the night.

PLEASE NOTE:

The table opposite can be used to determine the appropriate time zone when setting the hour/minute hands.

Straps and bracelets

As you would expect, we place as much emphasis on the quality of our straps and bracelets as we do our watches. We only use the finest materials in our straps, with quick-release pins also included for your convenience.

The following guidelines explain how easy it is to use, adjust and replace your Christopher Ward strap or bracelet.

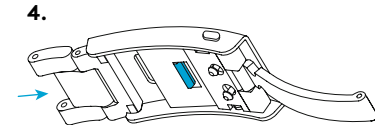

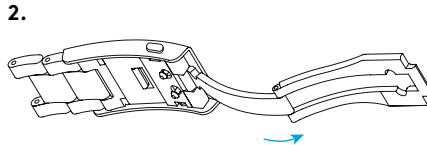

Using the quick-release pins on your strap/bracelet

1. Locate the quick-release pin (or pins) on your strap (A) or bracelet (B). Pull the pin(s) inwards to detach.
2. To reattach your strap (C) or bracelet (D), pull the pin(s) inwards, and align the spring bars so that they click securely into the lug holes on each side.

How to use the micro adjustment on your bracelet

1. Press buttons to release.
2. Pull open the clasp.
3. There are five micro adjustment positions, which allows for a maximum extension of 10mm. To extend, pull the lever to unlock and simultaneously pull on the bracelet into the desired position.
4. To shorten, simply pull the lever to unlock and push the bracelet back into the clasp.

Water resistance

Although your watch has been through vigorous static pressure testing, it is worth remembering that there are many variables that can affect the water resistance of your watch. For instance, arm movements during swimming and the sudden impact of diving and water sports will drastically increase the pressure the watch is under.

Wearing your watch in the bath, shower, or sauna can also have an effect as a rapid increase in temperature can cause seals to expand and in extreme cases, malfunction or create condensation.

For these reasons, the water resistance rating of your watch (as shown) should only ever be considered a guideline and we strongly recommend they are always adhered to.

1 ATM (10 metres)

Safe to wear your watch while washing your hands with tap water

15 ATM (150 metres)

Safe to use while snorkelling in open water

100 ATM (1000 metres)

Professional deep sea diving

3 ATM (30 metres)

Washing your car and/or general hose pipe usage

30 ATM (300 metres)

Ideal for experienced divers and those practising scuba-diving

5 ATM (50 metres)

Water resistant to most household shower units

60 ATM (600 metres)

Professional divers, experiencing prolonged exposure underwater

60|60 Guarantee

Your watch is constructed from the finest components and powered by a Swiss mechanical movement. As with all quality watches, with the right care and attention, your new timepiece has the potential to become an heirloom, giving joy to future generations.

It's for this reason we've created an industry-leading approach to after-sales care, starting with our famous 60|60 Guarantee – the most comprehensive warranty in watchmaking.

60-day free returns

We hope you'll be happy with your watch from the moment it arrives. However, if that's not the case you have 60 days to return it in perfect, unused condition (with all its accompanying paperwork) in order to receive a replacement or full refund.

60-month movement guarantee

Your watch is powered by a precision-engineered Swiss movement. In the rare event that your movement develops a fault within five years we'll repair it for free under warranty. Your watch will need to be sent to us for a full diagnosis before processing a repair under warranty. We will always keep you informed before carrying out any work.

Service and repairs: the Christopher Ward way

Our approach to service and repairs is about uncompromised quality and great value for money. The process, led by our expert technicians, won't cost the earth and will have the watch back on your wrist in reasonable time. We recommend you service your watch every three to four years to keep it in peak condition.

PLEASE NOTE:

The 60|60 Guarantee does not cover accidental damage. Any service or repair by a third-party retailer will void your 60|60 Guarantee. For more details, please visit our website.

Keeping in touch with Christopher Ward

From humble beginnings in 2004 (our first workshop was a refurbished chicken shed!) Christopher Ward has won a global following – and can justifiably claim to make the most affordable luxury watches in the world.

For many of our fans, the philosophy of trying to put luxury watches within the reach of everyone, is as smart as the timepieces themselves. This open approach sees co-founders Mike France and

Peter Ellis communicate personally with customers and listen to their feedback. Something that helps us improve our offering to you. As the owner of a Christopher Ward watch, if you ever need to get hold of us we're at your service. And if you'd like to explore the CW world more, you can follow us on social media.
