

The Goodison
Owner's handbook

Congratulations on your purchase
of *The Goodison*.

An ultra-precise quartz chronograph, its
development has been overseen by Everton
to ensure authenticity and excellence.

Featuring a backplate 'coin' crafted from a 1930s
Goodison turnstile (engraved with a diagram of
Goodison Park), a strap made from an Everton
team shirt, and an inner ring engraved with the
criss-cross pattern of the Gwladys Street/Bullens
Road balcony, it's the ultimate horological tribute
to the quintessential English football ground.

Wear it in good health.

And, up the Toffees!

The features and technical details of your Goodison

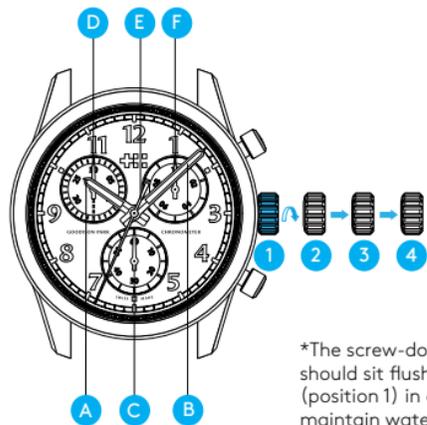

- Swiss made
- Quartz ETA G10.202 AD COSC, with chronograph complication, PowerDrive and PreciDrive
- Applied numerals and Twin-flag logo
- Marine-grade stainless steel light-catcher case with polished and brushed surfaces
- Matt finish dial
- 1/10th second and 30-minute counter, and running seconds hand sub-dial.
- Pushers circular brushed with polished facet
- Clear sapphire caseback over a disc made from the turnstile at Goodison Park.
- Polished hour and minute hands, and 60 second counter.
- Super-LumiNova® C1 BL Grade X1
- Rehaut engraved with Archibald Leitch pattern

Technical details

Calibre	ETA G10.202 AD COSC
Battery	394
Battery lifetime	38 months, 20 months if chronograph running
Case	Stainless steel
Diameter	39 mm
Height	12.30 mm
Weight	56g
Water resistance	15 ATM (150m)
Frequency	32'768 Hz
Timing tolerance	+/- 10 sec per year
Lug to lug	45.80mm
Strap width	20 mm

Setting the time

- A** Hour hand
- B** Minute hand
- C** Running seconds hand
- D** 30-minute counter
- E** 60-seconds counter
- F** 1/10 second counter

4-position crown

- 1** Crown secured position
- 2** Neutral position
- 3** Synchronisation position
- 4** Time-setting position (unscrewed, fully pulled out)

*The screw-down crown should sit flush to the case (position 1) in order to maintain water resistance.

Using the chronograph function to measure game duration

When the half starts, engage the chronograph function using push-button A. Then, use the subdial at 10 o'clock to track the elapsed time. When the hand has made one and a half revolutions – and reaches the dotted line – 45 minutes have elapsed. To stop the timing, press push-button A.

Single timing function

START Press **A**

STOP Press **A**

Time readout on example

- 5 minutes,
- 15 seconds
- 1/10th of a second

Reset, Press **B**

Split time function

START Press **A**

SPLIT 1 Press **B**

Time readout on example

- 6 minutes,
- 34 seconds
- 3/10th of a second

RESTART Press **B**

SPLIT 2 Press **B**

Time readout on example

- 12 minutes,
- 26 seconds
- 7/10th of a second

RESTART Press **B**

STOP Press **A**

Time readout on example

- 24 minutes,
- 57 seconds
- 9/10th of a second

Reset subdials, Press **B**

Synchronisation of the subdials

If chronograph hands are not aligned all at 12 o'clock before starting the single timing function or split time function they need resetting

First pull crown out to position **3**

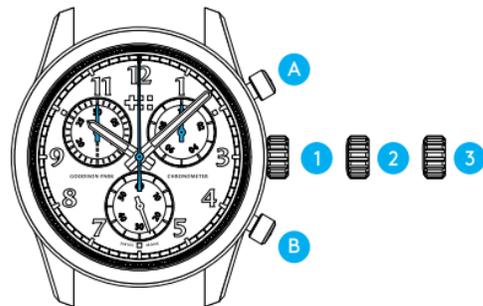

Press push-button **A** to select hand needed to set, the selected hand will complete a full revolution of the dial when selected

Press push-button **B** to adjust the selected hand (single pushing for finer adjustment and hold down for quicker adjustment)

Press push-button **A** to select the next hand

Follow for all hands

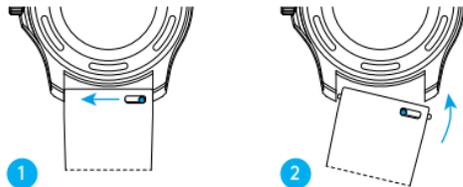

When finished screw crown to position **1** to exit resetting

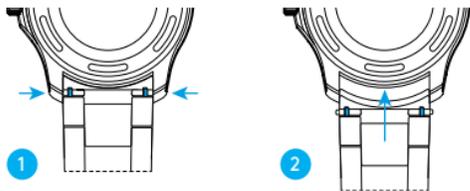

Using the quick-release pins

- 1 Locate the quick-release pins on the underside of your case. Pinch the pins inwards to detach.
- 2 To reattach your strap or bracelet, pinch the pins inwards, and align the spring bars so they click securely into the lug holes on either side of the strap or bracelet.

Water resistance

Although your watch has been through vigorous static pressure testing, it is worth remembering that there are many variables that can affect the water resistance of your watch. For instance, arm movements during swimming and the sudden impact of diving and water sports will drastically increase the pressure the watch is under.

Wearing your watch in the bath, shower, or sauna can also have an effect as a rapid increase in temperature can cause seals to expand and in extreme cases, malfunction or create condensation.

For these reasons, the water resistance rating of your watch (as shown) should only ever be considered a guideline and we strongly recommend they are always adhered to.

15 ATM (150 metres)

Safe to use while snorkelling
in open water

5 year movement guarantee

Your watch is powered by a precision-engineered Swiss movement. In the rare event that your movement develops a fault within five years we'll repair it for free under warranty. Your watch will need to be sent to us for a full diagnosis before processing a repair under warranty. You'll always be informed before carrying out any work.

The Guarantee does not cover accidental damage. Any service or repair by a third-party retailer will void your Guarantee. For more details, please visit our website.

Service and repairs

Our approach to service and repairs is about uncompromised quality and great value for money. The process, led by our expert technicians, won't cost the earth and will have the watch back on your wrist in reasonable time. We recommend you service your watch every three to four years to keep it in peak condition.

60-day free returns

We hope you'll be happy with your watch from the moment it arrives. However, if that's not the case you have 60 days to return it in perfect, unused condition (with all its accompanying paperwork) in order to receive a replacement or full refund.

"...HEY, PUT THAT CANDLE OUT..."

CHRISTOPHER WARD

COMMEMORATIVE EDITION

SWISS MADE

S. STEEL - 15 ATM

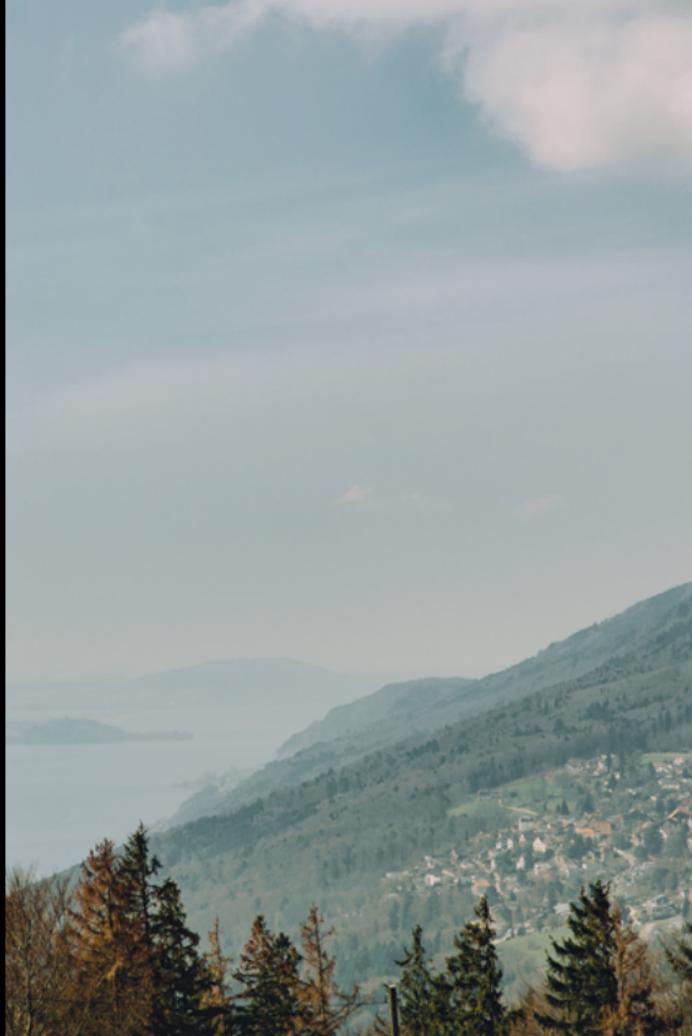

A Christopher Ward watch brings idiosyncratic English design together with Swiss watchmaking expertise. We obsessively oversee every part of the process – and only when we're delighted with each element of the watch, will we sell it. Something you'll appreciate whenever you wear it.

Swiss made

Every Christopher Ward is built by hand in Switzerland, the epicentre of fine watchmaking, which offers an unrivalled pool of talent, enabling us to create watches and movements that rival the best.

It's here that our world-renowned 'JJ Calibres' movements were created, bringing haute horology to a new, wider audience of watch-lovers. And it's in the spotless rooms – and on those rows of white tables – that we created Calibre SH21, the first commercially viable movement from a British brand in 50 years.

English design

Watchmaking can be conservative. A little too conservative for our taste. From the smooth lines of our iconic Light-catcher™ case to the precision engraving of our twin flags logo on a movement's rotor arm, our approach to design is both bold and detailed. We're careful to play by the rule book but occasionally like to rip it up as well.

England is the nation that gave the world the Aston Martin and the Sex Pistols. The design of our watches reflects both sides of our nature. Often at the same time.

Innovation

Mechanical watchmaking may be a traditional discipline, but this never stops us from pushing – and breaking – its boundaries.

Which is why we engineered a perpetual moonphase movement that's accurate for 128 years. Re-created the first super compressor mechanism in 50 years. And launched Calibre SH21, the first in-house British movement in decades.

Innovation is at the core of what we do. And our timepieces show this.

Your Christopher Ward watch is covered by our 60|60 Guarantee.

This means that you can return it 60 days after purchase and receive a full refund (as long as the watch is in perfect condition).

And if your watch develops a mechanical fault within five years (60 months), we'll repair it for free. Please use the warranty card opposite to arrange this.

If you ever need to get hold of us we're at your service. And if you'd like to explore the CW world more, you can follow us on social media.
